

# Features of your personal safety app

## Tether RE

GCAAR is introducing Tether RE as a new member benefit for its primary REALTOR® members on April 30, 2026—an all-in-one personal safety and productivity app designed to protect you and simplify daily business tasks. Take a look at its features below.

### 24/7 safety monitoring system

- Round-the-clock monitoring ensures you can work confidently, knowing help is always available.
- With Tether RE, you're never truly alone, providing an added layer of security during every interaction.
- Tether RE can be used any time, whether on or off work, making the app a comprehensive personal protection solution.

### SOS alerts

- This feature provides a discreet emergency alert system that can be activated instantly to notify emergency contacts and authorities.
- You can use SOS alerts as a panic button any time you feel unsafe.
- Each agent sets up a safety pin in Tether RE. Your safety pin tells Tether RE's 24-hour safety monitoring system that you are okay, and cancels any alerts. The app also offers a three-second hold feature for agents that escalates the emergency and triggers Tether RE's 24-hour safety monitoring to dispatch help immediately to the agent's precise location.

### Safety proximity timers

- You can set timers to check in periodically, offering peace of mind during showings or in unfamiliar situations.
- This timer is automatic and is triggered when you pull up to each showing property, eliminating the need for you to turn it on and off.

- The duration of the timer is set by the agent and can be adjusted or remain constant for easy usability and automatic activation.
- If you don't leave the property on time, Tether RE's 24-hour safety monitoring service will check in and determine if help needs to be dispatched.

### Struggle/impact alerts

- Automatic alerts are triggered by sudden impacts or struggles, ensuring an immediate response in critical situations.
- This feature detects falls, physical attacks and even car accidents, protecting agents any time you use your app.
- Tether RE's dual pins are used with this feature, allowing help to be silenced or dispatched immediately to your precise location. If you've lost consciousness or are unable to reach your phone after the emergency, Tether RE's 24-hour safety monitoring will dispatch EMS to your precise location.

### Productivity features

The Tether RE platform is designed to integrate seamlessly into your daily routine. This guarantees you have the app's safety features in hand when you need them.

Productivity tools include:

- **Showing features:** Streamlined tools for navigating and managing property showings.
- **Turn-by-turn navigation:** Helps you and your clients easily find property locations with optimal routing, or a follow-me option that you control.
- **Mileage tracking:** Automatically logs travel distances during showings for easy reporting.
- **Expense tracking:** Simplifies tracking and categorizing business-related expenses with easy, in-app photo capturing of receipts and expenses.
- **Property information auto-population:** Automatically provides detailed property data when you and your buyers arrive at the property.
